How to install standard or extended front fender for the Daytona 675 or Street Triple/R:

1. First take the old one off by simply loosening the brake lines and fender bolts
2. Slide the fender forward till it touches the forks.
3. Pinched the hose clips and fender till you have enough space to pull the fender through.
5. Reverse the process.

Some other guys actually removed the front wheel, I was lucky to get this done my way but if you feel it might not be a good idea then remove the wheel.

Look at the difference in size, it's very noticeable on the ground but once on the bike it looks just right.
